SELF-CONTAINED
PORTABLE LAVATORIES**

Product Overview

JobJon Portable Solutions presents the 100S/W, our approach to contemporary washroom solutions. As events like outdoor concerts, conferences, and festivals shift away from multi-stall lavatories and portable restrooms, and as urban construction sites demand smaller footprints with limited trailer space, the 100S/W emerges as the solution. Designed for scenarios where connecting to sewer and water services is a challenge, this product ensures modern conveniences for teams everywhere. The 100S/W also boasts an exclusive skid option, for easy accessibility by forklift.

Key Features:

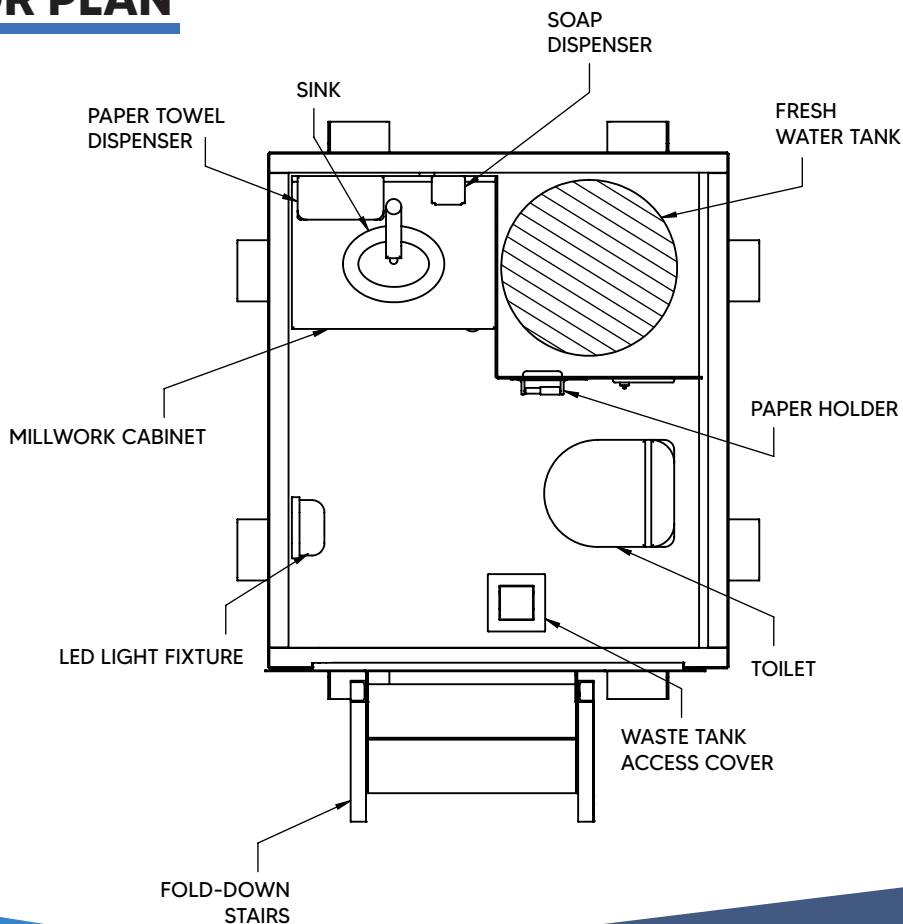

- The 100S/W boasts an impressive 118 gallons of fresh water, and 120 gallons of sewage capacity, eliminating the need for on-site services or additional water/sewage tanks.
- Complements your existing site modules by offering a private toilet stall complete with standard washroom amenities such as mirrors, sinks, and paper towel dispensers.
- For larger sites, the 100S/W is also available in various larger layouts.
- Facilitates easy drop off and setup
- Includes built-in, fold-down stairs
- Ensures sanitation with a fully-loaded below-counter HOT WATER system.
- Compact and rugged in design, measuring 5' x 5' 8".
- Powered by 120V 15 AMP for convenience.
- Simple setup, maintenance, and winterization procedures.
- Equipped with heating and heat tracing capabilities to withstand harsh northern winters.

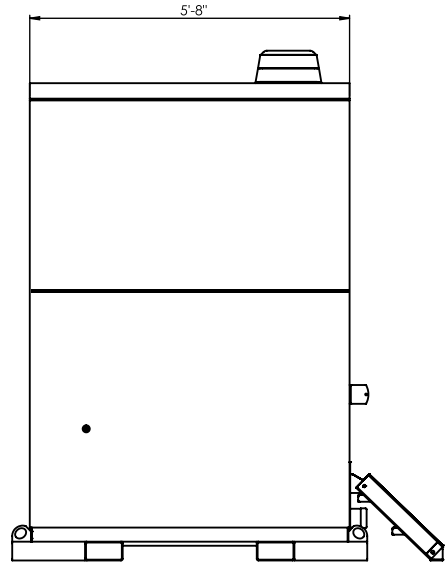

JobJon's Self-Contained 100 series washrooms offer immaculate spaces that cater to your business needs and destinations with utmost cleanliness and convenience.
